- (1) Mr. Sethi has ₹ 10,000 to invest in one of three options: A, B or C. The return on his investment depends on whether the economy experiences inflation, recession or no change at all. The possible returns under each economic condition are given below:

| STRATEGY | STATES OF NATURE | | |
|----------|------------------|-----------|-----------|
| | INFLATION | RECESSION | NO CHANGE |
| A | 2000 | 1200 | 1500 |
| B | 3000 | 800 | 1000 |
| C | 2500 | 1000 | 1800 |

What should he decide using the (i) Maximax (ii) Maximin (iii) Laplace (iv) Minimax regret and (v) Hurwicz ($\alpha = 0.6$) criteria.

SOLUTION:

(i) MAXIMAX CRITERION:

| | INFLATION | RECESSION | NO CHANGE | MAXIMUM |
|---|-----------|-----------|-----------|--|
| A | 2000 | 1200 | 1500 | 2000 |
| B | 3000 | 800 | 1000 | 3000 |
| C | 2500 | 1000 | 1800 | 2500 |

∴ By Maximax criterion, B is the best option.

(ii) MAXIMIN CRITERION:

| | INFLATION | RECESSION | NO CHANGE | MINIMUM |
|---|-----------|-----------|-----------|--|
| A | 2000 | 1200 | 1500 | 1200 |
| B | 3000 | 800 | 1000 | 800 |
| C | 2500 | 1000 | 1800 | 1000 |

∴ By Maximin Criterion, A is the best option.

(iii) LAPLACE CRITERION

| | INFLATION | RECESSION | NO CHANGE | EXPECTED PAYOFF |
|---|-----------|-----------|-----------|-----------------|
| A | 2000 | 1200 | 1500 | 1566.67 |
| B | 3000 | 800 | 1000 | 1600 |
| C | 2500 | 1000 | 1800 | <u>1766.67</u> |

∴ By Laplace criterion, C is the best option.

(iv) MINIMAX REGRET CRITERION

| | INFLATION | RECESSION | NO CHANGE |
|-------------------|-----------|-----------|-----------|
| A | 2000 | 1200 | 1500 |
| B | 3000 | 800 | 1000 |
| C | 2500 | 1000 | 1800 |
| COLUMN MAXIMUM | 3000 | 1200 | 1800 |

REGRET TABLE:

| | INFLATION | RECESSION | NO CHANGE | MAXIMUM |
|---|-----------|-----------|-----------|------------|
| A | 1000 | 0 | 300 | 1000 |
| B | 0 | 400 | 800 | 800 |
| C | 500 | 200 | 0 | <u>500</u> |

∴ By minimax regret criterion, C is the best option.

(v) HURWICZ ($\alpha=0.6$) CRITERION $W_0 = (\alpha \times \text{MAX}) + (1-\alpha) \times \text{MIN}$

| | INFLATION | RECESSION | NO CHANGE | MAX | MIN | W_0 |
|---|-----------|-----------|-----------|------|------|-------------|
| A | 2000 | 1200 | 1500 | 2000 | 1200 | 1680 |
| B | 3000 | 800 | 1000 | 3000 | 800 | <u>2120</u> |
| C | 2500 | 1000 | 1800 | 2500 | 1000 | 1900 |

∴ By Hurwicz criterion, B is the best option.

- (2) Pay offs of three acts X, Y, Z and the status of nature P, Q, R are given below:

| STATES OF NATURE | PAY-OFFS (₹) | | |
|------------------|--------------|------|------|
| | X | Y | Z |
| P | -120 | -80 | 100 |
| Q | 200 | 400 | -300 |
| R | 260 | -260 | 600 |

The probabilities of the status of nature are 0.3, 0.3 and 0.4 respectively. Find the best action using:

- (i) EMV (ii) EOL criterion and also find EVPI

SOLUTION:

- (i) EXPECTED MONETARY VALUE:

| STATES OF NATURE | PROB. | ACTS | | | EXPECTED VALUE | | |
|------------------|-------|------|------|------|----------------|------|-----|
| | | X | Y | Z | X | Y | Z |
| P | 0.3 | -120 | -80 | 100 | -36 | -24 | 30 |
| Q | 0.3 | 200 | 400 | -300 | 60 | 120 | -90 |
| R | 0.4 | 260 | -260 | 600 | 104 | -104 | 240 |

$$EMV = 128 \quad -8 \quad \boxed{180}$$

Since Z has the highest EMV, it ~~seems~~ is the best action.

- (ii) EXPECTED OPPORTUNITY LOSS:

| STATES OF NATURE | PROB. | ACTS | | | COND. OPP. LOSS | | | WEIGHTED OPP. LOSS | | |
|------------------|-------|------|------|------|-----------------|-----|-----|--------------------|-----|-----|
| | | X | Y | Z | X | Y | Z | X | Y | Z |
| P | 0.3 | -120 | -80 | 100 | 220 | 180 | 0 | 66 | 54 | 0 |
| Q | 0.3 | 200 | 400 | -300 | 200 | 0 | 700 | 60 | 0 | 210 |
| R | 0.4 | 260 | -260 | 600 | 340 | 860 | 0 | 136 | 344 | 0 |

$$EOL = 262 \quad 398 \quad \boxed{210}$$

Since Z has the lowest EOL, it is the best action.

$$\therefore \text{EVPI} = \min(EOL) = \underline{210}$$

$$\begin{aligned} EPPI &= (100 \times 0.3) + (400 \times 0.3) + (600 \times 0.4) \\ &= 30 + 120 + 240 \\ &= \underline{\underline{390}} \end{aligned}$$

$$\begin{aligned} EVPI &= EPPI - \max(EMV) \\ &= 390 - 180 \\ &= \underline{\underline{210}} = \min(EOL) \end{aligned}$$

- (3) Marketing staff of a certain industrial organization has submitted the following payoff table, giving profits in million rupees, concerning a certain proposal depending upon the state of technological advance.

| TECH ADVANCE | DECISION | |
|-----------------|----------|--------|
| | ACCEPT | REJECT |
| Much | 2 | 3 |
| Little | 5 | 2 |
| None | -1 | 4 |

The probabilities are 0.2, 0.5 and 0.3 for much, little and none technological advance respectively. Find the optimum decision based on (i) EMV (ii) EOL also find EVPI

SOLUTION:

(i) EMV:

| TECH ADVANCE | PROB. | DECISION | | EXPECTED VALUE | |
|-----------------|-------|----------|--------|----------------|--------|
| | | ACCEPT | REJECT | ACCEPT | REJECT |
| Much | 0.2 | 2 | 3 | 0.4 | 0.6 |
| Little | 0.5 | 5 | 2 | 2.5 | 1.0 |
| None | 0.3 | -1 | 4 | -0.3 | 1.2 |

$$EMV = \underline{2.6} \quad \boxed{2.8}$$

Since $\max(EMV) = 2.8$, to reject is the optimum decision

(ii) EOL:

| TECH ADVANCE | PROB. | DECISION | | COND. OPP. LOSS | | WEIGHTED OPP. LOSS | |
|-----------------|-------|----------|--------|-----------------|--------|--------------------|------------|
| | | ACCEPT | REJECT | ACCEPT | REJECT | ACCEPT | REJECT |
| Much | 0.2 | 2 | 3 | 1 | 0 | 0.2 | 0 |
| Little | 0.5 | 5 | 2 | 0 | 3 | 0 | 1.5 |
| None | 0.3 | -1 | 4 | 5 | 0 | 1.5 | 0 |
| | | | | | | <u>1.7</u> | <u>1.5</u> |

Since $\min(EOL) = 1.5$, to reject is the optimum decision.

Also, $EVPI = \min(EOL) = \underline{1.5}$

$$\begin{aligned}EPPI &= (3 \times 0.2) + (5 \times 0.5) + (4 \times 0.3) \\&= 0.6 + 2.5 + 1.2 \\&= \underline{\underline{4.3}}\end{aligned}$$

$$\begin{aligned}EVPI &= EPPI - \max(EMV) \\&= 4.3 - 2.8 \\&= \underline{\underline{1.5}} = \min(EOL)\end{aligned}$$

- (A) A producer of boats has estimated the following distribution of demand for a particular kind of boat:

| | | | | | | | |
|--------------|------|------|------|------|------|------|------|
| NO. DEMANDED | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| PROBABILITY | 0.14 | 0.27 | 0.27 | 0.18 | 0.09 | 0.04 | 0.01 |

Each boat costs him ₹ 7000 and he sells them for ₹ 10,000 each. Any boats left unsold at the end of the season must be disposed off for ₹ 6000 each. How many boats should be in stock so as to maximize his expected profit.

SOLUTION:

If D denotes the demand and S , the number of boats in supply stock, then the conditional profit values are computed as follows:

$$\begin{aligned} \text{PROFIT FUNCTION} \} &= \text{MARGINAL PROFIT} = 10000 - 7000 = 3000 \\ &= \text{MARGINAL LOSS} = 7000 - 6000 = 1000 \end{aligned}$$

| STATE OF NATURE (DEMAND) | PROB. | CONDITIONAL PROFIT (₹) / (COURSE OF ACTION (STOCK)) | | | | | | |
|--------------------------|-------|---|-------|-------|-------|-------|-------|-------|
| | | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| 0 | 0.14 | 0 | -1000 | -2000 | -3000 | -4000 | -5000 | -6000 |
| 1 | 0.27 | 0 | 3000 | 2000 | 1000 | 0 | -1000 | -2000 |
| 2 | 0.27 | 0 | 3000 | 6000 | 5000 | 4000 | 3000 | 2000 |
| 3 | 0.18 | 0 | 3000 | 6000 | 9000 | 8000 | 7000 | 6000 |
| 4 | 0.09 | 0 | 3000 | 6000 | 9000 | 12000 | 11000 | 10000 |
| 5 | 0.04 | 0 | 3000 | 6000 | 9000 | 12000 | 15000 | 14000 |
| 6 | 0.01 | 0 | 3000 | 6000 | 9000 | 12000 | 15000 | 18000 |

EXPECTED PROFIT (EMV): 0 2440 3800 **4080** 3640 2840 1880

Therefore, the producer should stock 3 boats to maximize profit.

- (5) A bookstore sells a particular book of tax laws for ₹100. It purchases the book for ₹80 per copy. Since some of the tax laws change every year, the copies unsold at the end of a year become outdated and can be disposed off for ₹30 each. According to past experience, the annual demand for this book is between 18 and 23 copies. Assuming that the order for this book can be placed only once in a year, the store's manager has to decide how many copies of the book should be purchased.
- Create a pay-off matrix and hence find the best course of action using (i) maximax (ii) maximin (iii) Laplace (iv) minimax regret and (v) Hurwicz ($\alpha=0.6$) criteria.
- (II) If the probabilities of occurrence of the various events are respectively 0.05, 0.1, 0.3, 0.4, 0.1 and 0.05, find the best course of action using (i) EMV (ii) EOL methods. Also find EVPI.

SOLUTION:

$$\text{Marginal Profit} = 100 - 80 = \underline{\underline{20}}$$

$$\text{Marginal loss} = 80 - 30 = \underline{\underline{50}}$$

(i) MAXIMAX CRITERION

| STRATEGIES (COURSES OF ACTION) | STATES OF NATURE (DEMAND) | | | | | | MAXIMUM |
|--------------------------------------|---------------------------|------------|------------|------------|------------|------------|---|
| | $E_1 = 18$ | $E_2 = 19$ | $E_3 = 20$ | $E_4 = 21$ | $E_5 = 22$ | $E_6 = 23$ | |
| $A_1 = 18$ | 360 | 360 | 360 | 360 | 360 | 360 | 360 |
| $A_2 = 19$ | 310 | 380 | 380 | 380 | 380 | 380 | 380 |
| $A_3 = 20$ | 260 | 330 | 400 | 400 | 400 | 400 | 400 |
| $A_4 = 21$ | 210 | 280 | 350 | 420 | 420 | 420 | 420 |
| $A_5 = 22$ | 160 | 230 | 300 | 370 | 440 | 440 | 440 |
| $A_6 = 23$ | 110 | 180 | 250 | 320 | 390 | 460 | 460 |

$\therefore A_6$ is the best strategy

(ii) MAXIMIN CRITERION

| STRATEGIES (COURSES OF ACTION) | STATES OF NATURE (DEMAND) | | | | | | MINIMUM |
|--------------------------------------|---------------------------|------------|------------|------------|------------|------------|---|
| | $E_1 = 18$ | $E_2 = 19$ | $E_3 = 20$ | $E_4 = 21$ | $E_5 = 22$ | $E_6 = 23$ | |
| $A_1 = 18$ | 360 | 360 | 360 | 360 | 360 | 360 | 360 |
| $A_2 = 19$ | 310 | 380 | 380 | 380 | 380 | 380 | 310 |
| $A_3 = 20$ | 260 | 330 | 400 | 400 | 400 | 400 | 260 |
| $A_4 = 21$ | 210 | 280 | 350 | 420 | 420 | 420 | 210 |
| $A_5 = 22$ | 160 | 230 | 300 | 370 | 440 | 440 | 160 |
| $A_6 = 23$ | 110 | 180 | 250 | 320 | 390 | 460 | 110 |

$\therefore A_6$ is the best strategy by maximum criterion

(iii) LAPLACE CRITERION

| STRATEGIES (COURSES OF ACTION) | STATE OF NATURE (DEMAND) | | | | | | EXPECTED PAY OFF |
|--------------------------------------|--------------------------|------------|------------|------------|------------|------------|---------------------|
| | $E_1 = 18$ | $E_2 = 19$ | $E_3 = 20$ | $E_4 = 21$ | $E_5 = 22$ | $E_6 = 23$ | |
| $A_1 = 18$ | 360 | 360 | 360 | 360 | 360 | 340 | 360 |
| $A_2 = 19$ | 310 | 380 | 380 | 380 | 380 | 380 | 368.33 |
| $A_3 = 20$ | 260 | 330 | 400 | 400 | 400 | 400 | 365 |
| $A_4 = 21$ | 210 | 280 | 350 | 420 | 420 | 420 | 350 |
| $A_5 = 22$ | 160 | 230 | 300 | 370 | 440 | 440 | 323.33 |
| $A_6 = 23$ | 110 | 180 | 250 | 320 | 390 | 460 | 285 |

∴ By Laplace criterion, A_2 is the best option

(iv) MINIMAX REGRET CRITERION:

column maximum } 360 380 400 420 440 460

REGRET TABLE:

| STRATEGIES (COURSES OF ACTION) | $E_1 = 18$ | $E_2 = 19$ | $E_3 = 20$ | $E_4 = 21$ | $E_5 = 22$ | $E_6 = 23$ | MAXIMUM |
|--------------------------------------|------------|------------|------------|------------|------------|------------|---------|
| $A_1 = 18$ | 0 | 20 | 40 | 60 | 80 | 100 | 100 |
| $A_2 = 19$ | 50 | 0 | 20 | 40 | 60 | 80 | 80 |
| $A_3 = 20$ | 100 | 50 | 0 | 20 | 40 | 60 | 100 |
| $A_4 = 21$ | 150 | 100 | 50 | 0 | 20 | 40 | 150 |
| $A_5 = 22$ | 200 | 150 | 100 | 50 | 0 | 20 | 200 |
| $A_6 = 23$ | 250 | 200 | 150 | 100 | 50 | 0 | 250 |

∴ By minimax regret criterion, A_2 is the best option

(V) HURWICZ ($\alpha=0.6$) CRITERION

$$W_0 = (\alpha \times \text{MAX}) + (1-\alpha) \times \text{MIN}$$

| STRATEGIES (COURSES OF ACTION) | E_1 | E_2 | E_3 | E_4 | E_5 | E_6 | MAX | MIN | W_0 |
|--------------------------------------|-------|-------|-------|-------|-------|-------|-----|-----|---|
| A_1 | 360 | 360 | 360 | 360 | 360 | 360 | 360 | 360 | 360 |
| A_2 | 310 | 380 | 380 | 380 | 380 | 380 | 380 | 310 | 352 |
| A_3 | 260 | 330 | 400 | 400 | 400 | 400 | 400 | 260 | 344 |
| A_4 | 210 | 280 | 350 | 420 | 420 | 420 | 420 | 210 | 336 |
| A_5 | 160 | 230 | 300 | 370 | 440 | 440 | 440 | 160 | 328 |
| A_6 | 110 | 180 | 250 | 320 | 390 | 460 | 460 | 110 | 320 |

\therefore By Hurwicz criterion, $A_1 = 18$ books is the best option.

(II)

(1) EXPECTED MONETARY VALUE :

| STATES OF NATURE (DEMAND) | PROB. | COURSES OF ACTION (STRATEGIES) | | | | | |
|---------------------------------|---------|--------------------------------|------------|---|------------|------------|------------|
| | | $A_1 = 18$ | $A_2 = 19$ | $A_3 = 20$ | $A_4 = 21$ | $A_5 = 22$ | $A_6 = 23$ |
| $E_1 = 18$ | 0.05 | 360 | 310 | 260 | 210 | 160 | 110 |
| $E_2 = 19$ | 0.10 | 360 | 380 | 330 | 280 | 230 | 180 |
| $E_3 = 20$ | 0.30 | 360 | 380 | 400 | 350 | 300 | 250 |
| $E_4 = 21$ | 0.40 | 360 | 380 | 400 | 420 | 370 | 320 |
| $E_5 = 22$ | 0.10 | 360 | 380 | 400 | 420 | 440 | 390 |
| $E_6 = 23$ | 0.05 | 360 | 380 | 400 | 420 | 440 | 460 |
| EXPECTED VALUE | (EMV) = | 360 | 376.5 | 386 | 374.5 | 335 | 288.5 |

\therefore By EMV method, $A_3 = 20$ has the highest payoff and hence is the best option.

(ii) EXPECTED OPPORTUNITY LOSS

maximum values of payoff under each state of nature:

| | | | | | |
|------------|------------|------------|------------|------------|------------|
| $E_1 = 18$ | $E_2 = 19$ | $E_3 = 20$ | $E_4 = 21$ | $E_5 = 22$ | $E_6 = 23$ |
| 360 | 380 | 400 | 420 | 440 | 460 |

| STATES OF NATURE (DEMAND) | P R 0 B. | STRATEGIES (COURSES OF ACTION) CONDITIONAL OPPORTUNITY LOSS | | | | | |
|---------------------------------|-------------------|--|------------|--|------------|------------|------------|
| | | $A_1 = 18$ | $A_2 = 19$ | $A_3 = 20$ | $A_4 = 21$ | $A_5 = 22$ | $A_6 = 23$ |
| | | | | | | | |
| $E_1 = 18$ | 0.05 | 0 | 50 | 100 | 150 | 200 | 250 |
| $E_2 = 19$ | 0.10 | 20 | 0 | 50 | 100 | 150 | 200 |
| $E_3 = 20$ | 0.30 | 40 | 20 | 0 | 50 | 100 | 150 |
| $E_4 = 21$ | 0.40 | 60 | 40 | 20 | 0 | 50 | 100 |
| $E_5 = 22$ | 0.10 | 80 | 60 | 40 | 20 | 0 | 50 |
| $E_6 = 23$ | 0.05 | 100 | 80 | 60 | 40 | 20 | 0 |
| EOL = | | 51 | 34.5 | 25 | 36.5 | 76 | 122.5 |

therefore, using EOL method, $A_3 = 20$ is the best option.

$$\begin{aligned} \rightarrow EPPI &= (0.05 \times 360) + (0.1 \times 380) + (0.3 \times 400) + (0.4 \times 420) + \\ &\quad (0.1 \times 440) + (0.05 \times 460) \\ &= 18 + 38 + 120 + 168 + 44 + 23 = \underline{\underline{411}} \end{aligned}$$

$$\begin{aligned} \therefore EVPI &= EPPI - \max(EMV) \\ &= 411 - 386 = \underline{\underline{25}} = \min(EOL) \end{aligned}$$
